

ENERGY & GHG POLICY

Raghava Life Science is committed to continuously improving our operations while reducing energy costs. We strive to achieve sustainable growth by improving efficiency and creating a safe and comfortable work environment in all our operations.

Raghava Life Science's mission is to promote dual potency regimens while ensuring exceptional pharmaceutical efficiency. Focusing on our energy use and efficiency to achieve reductions in energy consumption and costs and to create a culture of awareness of its use.

OUR MISSION

- ✓ To become the most energy-efficient company among pharmaceutical companies.
- ✓ Reducing consumption of energy in our operations and contributing to our business objectives, including increasing products, quality, environmental leadership, and safety practices and reducing carbon emissions.
- ✓ Aim for the reduction in Green House Gases (GHG) emission (Scope 1 & Scope 2) as the minimum through driving GHG reduction program towards the de-carbonization goal.
- ✓ Conservation of energy through engineering solutions.
- ✓ Explore higher use of renewable energy sources while meeting our energy demand.
- ✓ Procuring energy at the required cost and reducing energy consumption wherever possible while establishing business objectives.
- ✓ Ensuring that all staff, customers, and suppliers are aware of Raghava Life Sciences' energy management policy and are motivated to conserve energy.
- ✓ Complying with all applicable legal and other requirements relating to the organization's energy use, consumption, and efficiency.

Our energy management policy is reviewed and updated as and when necessary to consider changing business conditions and to ensure opportunities for continuous improvement.
